Executive Summary

A portfolio designed around the work products and decisions expected in Financial Analyst and FP&A roles.

PORTFOLIO

4 projects

End-to-end finance cases

CORE MODELING

Excel + FP&A

Budget, forecast, scenarios

ANALYTICS

SQL + Python

Validation and analysis

REPORTING

BI + executive

KPIs, commentary, actions

- Transforms source data into controlled financial models, KPI reporting and management commentary.
- Covers budgeting, forecasting, variance analysis, profitability, COGS, EBITDA, cash flow and scenario planning.
- Connects financial results to drivers, risks, opportunities, recommendations, owners and timing.
- Uses synthetic portfolio data so the work can be shared publicly without presenting confidential company information.

Four Projects. Four Finance Decisions.

Each project answers a different management question while reinforcing a common FP&A workflow.

01

FP&A Executive Dashboard

Are we on plan?

Budget vs Actual | Forecast | KPI reporting

02

Amazon Marketplace Analytics

Where is performance coming from?

Revenue | mix | trends | marketplace drivers

03

Profitability & COGS Analysis

What is driving margin?

COGS | gross margin | profitability | cost drivers

04

Executive Financial Performance

What should management do next?

EBITDA | cash flow | scenarios | executive actions

Executive Financial Performance - 2026 YTD

Management scorecard from the upgraded corporate FP&A model.

Performance interpretation

- Revenue is modestly ahead of plan and +6.7% versus prior year.
- EBITDA is ahead of budget; margin protection remains dependent on disciplined operating spend.
- Cash conversion is the principal watch item and should be tracked alongside collections and working capital.
- Forecast governance is strong: model controls passed and forecast error is approximately 0.1%.

From Variance to Management Action

The portfolio is structured to move beyond reporting numbers into explaining causes and recommending responses.

1

Measure

Actual vs Budget / Forecast / Prior Year

2

Diagnose

Price, volume, mix, cost and operating drivers

3

Assess

Financial impact, risk and opportunity

4

Act

Recommendation, owner and timing

Management commentary standard

What changed > Why it changed > Financial impact > Forward risk/opportunity > Action > Owner > Timing

Revenue, COGS & Profitability Analysis

Commercial performance and cost structure are analyzed together to explain margin quality, not just top-line growth.

REVENUE

Trend + mix

Identify growth sources

COGS

Cost drivers

SEGMENTS

Contribution

Prioritize high-return areas

Illustrative gross margin

Illustrative operating margin

Decision use

- Identify margin-accretive segments.
- Investigate unfavorable cost variances.
- Separate revenue growth from profit growth.
- Support pricing, spend and mix decisions.

Scenario-Based Forward View

Driver-based scenarios translate assumptions into an explicit range of financial outcomes.

Downside

Revenue growth

PASS

Why this matters

- Reduces the risk of presenting inconsistent financial results.
- Creates a repeatable review process for monthly reporting and forecast updates.
- Demonstrates finance ownership: validate first, interpret second, communicate third.

Finance + Analytics + Communication

The portfolio combines financial judgment with the technical tools needed to produce repeatable decision support.

FINANCE

- Budgeting & forecasting
- Variance analysis
- Financial modeling
- Scenario planning
- Profitability & COGS

DATA

- Advanced Excel
- SQL
- Python / Pandas
- Data validation
- Reconciliation controls

REPORTING

- Power BI / Tableau
- KPI scorecards
- Executive dashboards
- Management commentary
- Recommendations

Built to support the decision, not just report the number.

Analyze

What changed?

Explain

Why did it change?

Forecast

What happens next?

Recommend

What should we do?
