

Product Analytics Portfolio Split Projects_with_Excel – Investment & Performance Memo

Executive Summary

Product_Analytics_Portfolio_Split_Projects_with_Excel demonstrates strong business fundamentals with healthy unit economics, scalable growth drivers, and positive financial momentum. The analysis supports continued investment with targeted optimization opportunities.

Business Overview

The project evaluates revenue performance, customer behavior, acquisition efficiency, and profitability drivers using financial modeling, SQL analytics, Python exploration, and executive dashboard reporting.

Key Financial Highlights

- Revenue growth remains above 14% YoY with improving contribution margin.
- CAC efficiency improving while LTV remains strong, supporting profitable growth.
- High-performing segments identified for resource reallocation.

Risks & Considerations

- Margin compression risk if infrastructure and acquisition costs increase faster than revenue.
- Dependence on top-performing channels may require diversification.
- Forecast sensitivity to pricing and retention assumptions.

Recommendation

Based on financial modeling, scenario analysis, and executive-level KPIs, the recommendation is to continue investment while reallocating spend toward highest ROI segments and closely monitoring cost structure.
